

To incorporate your experience with Agentic workflows, GitHub Copilot, and Claude into your

Bighit experience, I recommend adding a new bullet point that highlights the impact on your development process. This keeps the tone consistent with the rest of your resume.

Here is a recommended rephrasing:

Full Stack Engineer @Bighit [Nov 2022 – Mar 2024]

- **Pioneered the integration of agentic AI workflows using GitHub Copilot and Claude into the development lifecycle, automating PR reviews and CI/CD pipeline tasks to significantly accelerate engineering velocity and enhance deployment quality.**

-----Why this works:

- **Action-Oriented:** Using "Pioneered" highlights your proactive approach to adopting new technology.
- **Contextual:** It ties the tools (Copilot, Claude) directly to the technical process (PRs, CI/CD, development lifecycle).
- **Result-Focused:** It connects the use of these tools to "engineering velocity" and "deployment quality," which matches the metric-heavy style of your other bullet points.

Would you like me to adjust the wording to emphasize a different aspect, such as the specific time savings or team adoption?

Sahil Rathee

Senior Software Engineer & AI Architect with over 4 years of experience at the intersection of Financial Systems Engineering and Agentic AI workflows. Expert in architecting autonomous trading systems and scalable cloud infrastructure, with a proven ability to reduce AI operational costs by 70% through optimized RAG pipelines. Specialized in bridging the gap between sophisticated quantitative strategies and high-performance, full-stack software solutions.

Technical Expertise

- **Languages:** TypeScript, Python, Dart, Kotlin, GraphQL, Gremlin
- **Frameworks:** React Native, Flutter, Cocos Creator Engine, Angular, Node.js
- **Tools:** Git, AWS, GCP, Kubernetes, Docker, RabbitMQ, CI/CD, Microservice Arch., Serverless Computing, LangChain, Pinecone, Obsidian
- **Quantitative & Finance:** Quantitative Analysis, Financial Modeling, Algorithmic Strategy, Reinforcement Learning (RL), Market Data Analysis
- **Databases:** MySQL, Redis, MongoDB, Neptune, PostgreSQL
- **Soft:** Adaptability, Problem-Solving, Strategic Leadership, Cross-functional Stakeholder Management

Key Engineering Initiatives

Zenith: Autonomous Forensic Trading Workstation

- Built an autonomous trading system with a Python-based execution engine (Async/NLP-sentiment/Technical analysis) integrated with MetaTrader 5.
- Engineered a custom backtesting engine for historical simulation.
- Utilized NATS JetStream for real-time telemetry streaming to a custom Flutter dashboard.

Tech Stack: Python, PostgreSQL, Qdrant Vector DB, NATS, WebSockets, Flutter

Professional Experience

Lead Software Engineer @Orealfit [Nov 2025 - Present]

- Engineered a high-engagement, consolidated sports ecosystem featuring real-time scorecard streaming and interactive ad modules, driving user retention and backend scalability.
- Built a scalable health and wellness e-commerce platform using a monorepo architecture, significantly improving asset management and operational throughput.
- Developed a streamlined billing and GST-compliance solution for SMBs, leveraging edge computing to ensure low-latency performance and real-time financial tracking.
- Architected an end-to-end property and tenant management SaaS solution, implementing complex escrow and payment orchestration to automate rental business operations and reduce manual transaction overhead.
- Transitioned the team to agentic workflows by deploying autonomous dev and test agents, significantly accelerating feature delivery.
- Optimized RAG pipeline efficiency and AI infrastructure by building custom cost-monitoring tools, resulting in a **70% reduction** in monthly token expenditure.
- Engineered and scaled a comprehensive e-commerce business management platform, overseeing full-stack development and managing cross-functional teams to streamline operational workflows and improve delivery timelines.

Tech Stack: Flutter, Next.js, Go, C++, Node.js, PostgreSQL, Redis, Qdrant, Supabase, Cloudflare, Docker

Solutions Architect @GymWise India Private Limited [Mar 2024 - Nov 2025]

- Architected and led technical expansion for a health-sector platform serving **300+ gyms** across Delhi NCR, Australia, and Singapore, driving technical strategy and cross-regional system implementation.
- Oversaw local business partnerships, translating regional market requirements into scalable IT business strategies to drive operational growth and system integration.
- Spearheaded the design and implementation of container orchestration solutions, significantly optimizing system performance, high availability, and reliability.
- Developed and executed IT business strategies aligned with organizational goals, enhancing operational efficiency and fostering a culture of technical excellence.
- Designed and optimized information systems architecture, improving data flow and system integration across global regions.

Tech Stack: Cloud Infrastructure, IaC, Container Orchestration, System Architecture, Agentic Workflow Engineering, AWS, Google Play Console, Flutter, Golang

Full Stack Engineer @Bighit [Nov 2022 – Mar 2024]

- Spearheaded the redevelopment of tech infrastructure, including a React Native application and cloud infrastructure(AWS IaC), resulting in a **~80% reduction** in application size and a **~60% increase** in server efficiency and architecture availability.
- Designed and developed interactive features, including **advanced location tracking, dynamic chat module, and efficient push notifications**, significantly boosting user engagement and enhancing our **product's** user engagement.
- Played a pivotal **leadership role** in managing a 6-developer team, involving **task delegation, creating effective project roadmaps, facilitating onboarding and continuous training**, and ensuring team alignment with company goals and project objectives.
- Responsible for optimising and integrating **AWS services** like **Amazon Neptune** for database needs, managing clusters like **OpenSearch, Cache, Kafka**, and implementing efficient data synchronisation.
- Managed and optimised servers, reducing **API latency by about 80%**, database queries, and refined analytical data from logs and user tracking services, to forward the business in enhanced decision making and user satisfaction.
- Actively **collaborated** with cross-functional teams, including product leads, UI/UX designers, business development teams, and top executive leadership, **gathering and refining requirements**, providing valuable feedback on feature implementation, and **ensuring clear communication** and alignment between technical and non-technical stakeholders.

Tech Stack: TypeScript, React Native, GraphQL, Node.js, AWS Neptune, OpenSearch, Docker, Kubernetes, AWS, GCP, Google Domains, CI/CD

Full Stack Developer @Gamix Labs [Mar 2022 – Oct 2022]

- **Collaborated** closely with the clients like **OneFC, Bombay Play** teams to craft online **gaming websites(PWA) + HTML5 Games**, featuring in-browser responsive games akin to **Prodigy Rises**.
- Successfully deployed **Facebook instant games** for Vegas Slot Machines, utilising the **Cocos Creator Game Engine**. Additionally, developed Admin **dashboards** for streamlined management and data analysis.
- Configured **performance-oriented Node.js gaming servers** with **data-streaming services** for event streaming, implementing a **caching-first strategy** enhancing user experience and **accelerating server performance and throughput** while working with **MongoDB and Redis**.
- Led the **development and rollout** of a **facial/voice recognition web+native app**, to provide secure user verification across online interview platforms authentication.
- Adopted **TDD (Test-Driven Development)** to enhance software development processes, leading to increased developer confidence, faster feedback loops, and a more reliable codebase.

Tech Stack: TypeScript, Flutter, Dart, Java, Kotlin, Restful APIs, Redis, RabbitMQ, Angular, Cocos Creator Engine, GCP, Istanbul, Swagger

Education

DDUC, University of Delhi

Bachelor's in Science (Major: Computer Science)

2018 – 2021

Professional Interests & Growth

- Competitive Gaming: CS:Go, COD, DOTA
- Sports & Strategy: Soccer, Chess
- Finance & Markets: HFT, algorithmic trading, and quantitative analysis.
